Introduction

This Index Volume is a stand-alone companion to Butterflies of the World, providing multiple, cross-referenced ways to locate taxa. All page references point to the plate pages in the main work. In the two-volume edition, pages 1–352 are in Volume I and pages 353–708 are in Volume II.

The Alphabetical Index of Taxa covers genus, species, and subspecies. Genus entries are capitalized (e.g., Parnassius). Species and subspecies begin lowercase and are followed by the higher rank: a species is written as smintheus, Parnassius; a subspecies as mattooni, Parnassius smintheus. This format allows quick look-up by any epithet while keeping rank explicit.

The Species by Country section lists families and subfamilies in systematic order; within each subfamily, species appear in alphabetical order. For indexing clarity only, Hong Kong, China is listed separately. Crimea follows the locality indicated on specimen labels and is indexed under Ukraine. These practices are purely practical and do not express any political position.

The Author & Year Index cites the person or persons who originally described the taxon. When a subspecies is involved, the subspecies author and year are used rather than the species author. Authors sharing a surname are distinguished by initials (e.g., Felder, C.; Felder, R.), and joint authorship in taxon citations follows standard zoological form (e.g., Emmel, Emmel & Mattoon, 1998).

Additional index types, including a comprehensive systematic index, may be added in future revisions. Please refer to the latest version when consulting this volume.
